In addition to the basic call and SMS functions, also provide you with intelligent text input, clock / alarm, front and rear camera, music player (Micro SD card), tape recorders, calculators, browsers, e-mail, FM scenarios, timer on / off, including a variety of practical features to facilitate your work and leisure activities. In addition, the phone using a personalized man-machine interface design, improved functionality to meet your needs.

1. Technical Reference

2. Mobile Appearance

2.1 mobile phones appearance

3.Display

3.1display site map

The display consists of three parts:

Range	Description
The first line	Display a variety of stand-icon
The middle of the content	Display the network information, stand by small tools (such as the clock, point the king 'and so on, according to different type change) desktop function icon
The last line	Currently assigned to the function of the two soft keys and dial touch buttons

Three. Start using

1. A phone is switched on / off

Press and hold button on phone boot or shut down.

2. installation and removal battery/SIM card/memory card

When you apply for a network, you will get a SIM card, which contains proprietary information, such as the PIN, you can get the service options.

- use a SIM card please note the following information:
 - all miniature SIM cards should be placed on the children of the reach;
 - the SIM card and its contacts can easily scratch or be damaged due to bending, so
 - Carry, to be extra careful when you insert or remove the SIM card;
 - Before installing the SIM card, be sure to turn off the phone and then remove the battery

- Installation and removal of the battery and SIM as follows
 - If necessary, press and hold button until shutdown;
 - Figure 1, the upward pull from the battery cover;
 - In Figure 2, lift the battery from the battery to the left buckle, remove the battery;
 - ✧ Figure 3, the SIM card into the SIM card holder, until not move.
 - ✧ The gold contacts of the SIM card face down;
 - ✧ The gap of the SIM card, such as the shell at the identification;
 - To install the battery, as shown in Figure 2;
 - Metal contacts on the first battery at the battery-deck shrapnel, and then press the battery can be down;
 - Install the battery cover, as shown in

The first battery cover both ends of the buckle at the back shell groove away, and then the battery cover and push down the back cover as shown, to hear the "buckle" sound can be.

- Installation and removal of the T-flash card
 - The phone uses a the clamshell Micro SD deck;
 - Install the T-flash card. Open the clamshell T-Flash card connector, the metal of the T-flash card face down, according to the identity of the shell at the memory card into the slot, will deck down to hear the "label" sound can ;
 - Remove the T-flash. Push up the deck to hear the sound release the "label", you can Remove the memory card

3. Battery charging

- Connect the charger to plug in the power;
- The charger connector into the bottom of the phone's USB interface; At this time, the upper-left corner of the phone screen battery indicator will flash;;
 - If the charger is turned off, the screen displays charging video and indicates that the battery charge

- If the phone power is low, is still excessive use, charging starts, it may take some time before the charging indicator appears on the screen;
- When the battery indicator icon is displayed on the screen is full, and no longer flashing, indicates that the charge has been completed.
- During charging, batteries, cell phones and charger s may have a fever, is a normal phenomenon;
- After charging is completed, disconnect the AC p ower outletand mobilephone charger.

Note: The phone battery charge approximately 50% of capacity, which can be used apart. Completely filled i n and then run out of the first completely; fully charge d and then have to completely run out of second, whi ch requires three consecutive cycles, the battery is ea sy to achieve the best use of the state.

Four. Quick Start Guide

- If the PIN code three times in a row input errors, should enter the PUK code, then enter the new PIN code to confirm re-enter the new PIN code again and confirm.

1.3. PIN2 code

Some SIM cards may provide PIN2, the PIN2 code, cert

ain features are in use, such as call billing. Only the SIM card supports these features in order to use these features.

- If the PIN2 code three times in a row to enter the wrong PUK2 code, then enter the new PIN2 code confirmation, re-enter again a new PIN2 code and confirm.

1.4. PUK code

The PUK (Personal Unblocking Key) used to change your PIN locked. The PUK code is provided with the SIM card. If not provided, please contact your local service provider to ask for the PUK code.

- If the connection is ten times enter the wrong PUK code, SIM card can not continue to use please contact your ISP to replace the new SIM card.
- The PUK code can not be changed. If you have lost the PUK code, please contact the service provider.

1.5. PUK2 code

PUK2 code, supplied with some SIM cards. Used to change the locked PIN2 code.

- If the connection is ten times enter an incorrect PUK 2 code, SIM card will no longer continue to use the new SIM card,
- PUK2 code can not be changed. If lost, please contact the service provider.

1.6. Barring password

Call barring, 4 barring password. To apply this function, you can get the password from your service provider.

2. Health and safety information

2.1. Battery

- Do not short-circuit the battery device, which will damage the battery to generate heat and may cause fire.
- Prohibit the battery in hot or thrown into the fire, this will cause an explosion. Used batteries should be re

turned to the supplier or on the designated collection points, and can not be placed in household garbage.

2.2 Traffic Safety

The wireless phone has a powerful voice communication function, almost at any time, anywhere communications and liaison. But there are a number of important responsibilities, have the advantage of the wireless phone, each user must fulfill these responsibilities.

While driving, driving is your primary duties, answer the phone while driving should be vigilant and keep in mind the following tips:

- Understanding of the wireless phone and its features, such as speed dial and redial. If these features can help you make a call, rather than to make your driving hours of heart.
- If hands-free device, you should use a hands free. If possible, use either supply hands-free accessories th

at you can improve the convenience and security of wireless phone use.

- Wireless phone is placed in an easy-to-find place. Do not need to divert attention from the road, you can use the phone. If you receive an incoming call at an inconvenient time, as much as possible to apply the voice mail answers the phone.
- Told to call each other in your car; hang up when necessary, in the case of traffic jams or bad weather. Rain, sleet, snow, ice and even heavy traffic is very dangerous.
- Airbags, brakes, speed control system and fuel injection system should be free from the influence of wireless transmission. If you are experiencing the problems mentioned above, please contact the car dealer.
- Please turn off your phone when refueling, the same situation also applies to prohibit the use of two-way wireless devices. Please do not flammable, explosive materials and the phone on with the internal spark may cause a fire.

- Turn off the phone before the plane took off. In order to prevent interference with aircraft communications systems, never allowed to use the phone in flight. Consent in accordance with the safety requirements for the crew to allow before take-off of the aircraft did not use the phone.
- Set to flight mode of the phone will not communication system of the aircraft interference can not shutdown.

2.3 Use of the environment

- Should comply with this no matter where the special provisions, and turn off the phone when in use or may be dangerous.
- When connected to the mobile phones and other devices, you should read the user manual to learn more about the safety instructions, you can not connect with incompatible products.
- As with other mobile radio transmitting equipment, it i

s recommended that users: For satisfactory use of the equipment and personnel security, and should only be used in the normal work location.

2.4 Electronic equipment

Most electronic equipment is shielded from RF signals. However, some electronic equipment may not be shielded against the RF signals generated by the wireless handset.

■ Pacemakers

- When the phone is switched on, must be kept away from pacemakers six inches (15cm) above the distance;
- phone should not be carried in a breast pocket;
- use of the pacemaker on the other side of the ear to answer, may cause interference to reduce to a minimum.

■ Hearing aids

Some digital wireless phones may interfere with some hearing aids, if there is such interference, the deliberations

of substitutes can be used with your hearing aid manufacturer.

■ Other medical devices

If other personal medical devices, please consult the device manufacturer, to confirm these equipment is shielded from external RF energy. Physician can help you obtain this information.

■ Posted notice of the place

Posted a notice to shut down places to turn off the phone.

2.5. Other important information

■ Use only the first wife or by the manufacturer approved accessories. The use of any unauthorized accessories, there may affect the use of the phone's performance, damage your phone, and even lead to physical danger or violation of the relevant provisions of the national communication terminal products.

■ Clean your phone use a slightly damp or antistatic cl

oth, do not use dry or easy to produce static cloth.

Clean the surface of the phone, be careful not to use cleaning agents, chemicals. Cleaning your phone, please turn off.

- Your phone will generate electromagnetic fields, please do not place magnetic storage medium such as computer disks and the like. Use the phone near the television, telephone, radio and personal computers and other electrical equipment may cause interference, thus affecting the performance of the phone.
- Do not your mobile phone exposure in strong sunlight, avoid heat.
- Avoid all kinds of liquid into the phone's internal, so as not to cause damage.
- Do not drop, knock the phone Rough handling can break internal circuit boards.
- Please do not connect with other ancillary equipment.

3. Explanation of terms

To help you understand the main technical terms and ab

breviations in this manual, as well as better use of the phone functions, the following provides a definition of the meaning of some words.

ALS (Exchange line services)

ALS provides a function to join two lines with one SIM card. The use of the services needed to make and receive calls with any one line.

Dual card dual standby

Support dual card dual standby mobile phone user to insert two cards and two cards can be properly registered, can realize the two card standby at the same time and normal calls, SMS and other functions, including the realization of the two cards will also call the function.

Call barring

Limit cell phone to make and receive calls the function.

Call Transfer

Calls go to another mobile phone or fixed line telephone

functions.

Call on hold

Receive or make calls, keep another phone; when you need it to switch between the two calls.

Call Waiting

During the call, inform the user there was another call.

Line Identification Service (Caller ID)

Through the service, users can view the Caller ID or do not make their numbers displayed in each other's phone network functionality..

GSM (Global System for Mobile Communications)

Cellular communications international standards to ensure compatibility between different network operators. The GSM system covers most European countries and in many places around the world.

Multi-party call

Create up to 5 people at the same time participate in the call of the conference call function.

Roam

Use of mobile phones (such as tourism) in the local service area.

SIM (Subscriber Identity Module)

The SIM card contains a chip, in which there is required to use the phone (network and memory information, and user personal data). The SIM card can be inserted into the small slot of the phone behind the battery protection.

SMS (Short Message Service)

To another network user to send or receive information from another user no need to call with the other network service functions. Information can be generated or received.

ved, receive, edit or send.

Voice mail

Computer answering service. When you can not answer a call, the service functions of automatic answering their own voice (optional) sends greetings, and record information.

Other

GPRS General Packet Radio Service

SMS-CB Broadcast messages

WAP Wireless Application Protocol

FDN Fixed number dialing

IMEI International Mobile Equipment Identity, 15 digits, a mobile phone corresponds to a unique IMEI number□

1.FCC Statement

1. This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions:

- (1) This device may not cause harmful interference.
- (2) This device must accept any interference received, including interference that may cause undesired operation.

2. Changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

NOTE:

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation.

This equipment generates uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception,

which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

Reorient or relocate the receiving antenna.

Increase the separation between the equipment and receiver.

Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.

Consult the dealer or an experienced radio/TV technician for help.

SAR Information Statement

Your wireless phone is a radio transmitter and receiver. It is designed and manufactured not to exceed the emission limits for exposure to radiofrequency (RF) energy set by the Federal Communications Commission of the U.S. Government. These limits are part of comprehensive guidelines and establish permitted levels of RF energy for the general population. The guidelines are based on standards that were developed by

independent scientific organizations through periodic and thorough evaluation of scientific studies. The standards include a substantial safety margin designed to assure the safety of all persons, regardless of age and health. The exposure standard for wireless mobile phones employs a unit of measurement known as the Specific Absorption Rate, or SAR. The SAR limit set by the FCC is 1.6 W/kg. * Tests for SAR are conducted with the phone transmitting at its highest certified power level in all tested frequency bands. Although the SAR is determined at the highest certified power level, the actual SAR level of the phone while operating can be well below the maximum value. This is because the phone is designed to operate at multiple power levels so as to use only the power required to reach the network. In general, the closer you are to a wireless base station antenna, the lower the power output. Before a phone model is available for sale to the public, it must be tested and certified to the FCC that it does not exceed the limit established by the government adopted requirement for

safe exposure. The tests are performed in positions and locations (e.g., at the ear and worn on the body) as required by the FCC for each model. The highest SAR value for this model phone when tested for use at the ear is 0.726W/Kg and when worn on the body, as described in this user guide, is 0.775W/Kg(Body-worn measurements differ among phone models, depending upon available accessories and FCC requirements). The maximum scaled SAR in hotspot mode is 1.142W/Kg. While there may be differences between the SAR levels of various phones and at various positions, they all meet the government requirement for safe exposure. The FCC has granted an Equipment Authorization for this model phone with all reported SAR levels evaluated as in compliance with the FCC RF exposure guidelines. SAR information on this model phone is on file with the FCC and can be found under the Display Grant section of <http://www.fcc.gov/oet/fccid> after searching on FCC ID: **YSEGO963** Additional information on Specific Absorption Rates (SAR) can be found on the Cellular

Telecommunications Industry Association (CTIA) web-site at <http://www.wow-com.com>. * In the United States and Canada, the SAR limit for mobile phones used by the public is 1.6 watts/kg (W/kg) averaged over one gram of tissue. The standard incorporates a substantial margin of safety to give additional protection for the public and to account for any variations in measurements.

Body-worn Operation

This device was tested for typical body-worn operations. To comply with RF exposure requirements, a minimum separation distance of 10mm must be maintained between the user's body and the handset, including the antenna. Third-party belt-clips, holsters, and similar accessories used by this device should not contain any metallic components. Body-worn accessories that do not meet these requirements may not comply with RF exposure requirements and should be avoided. Use only the supplied or an approved antenna.
